Integrated Test Cup Instructions

1. Remove cap. (Key is held by technician.)

2. Donor provides specimen and secures cap. Note: Secure cap by pressing down on all three corners.

3. Check cap for tight seal. Technician dates and initials the security seal and places security seal over cap.

4. On a flat surface, technician inserts key and pushes in.

5. Peel off the label to view results.

6. Test is read while in reaction well.

7. A photocopy of the results can be made by placing the entire cup with the card face down on the copier.

Example: test shows positive for PCP

All positive results are presumptive and should be confirmed by an alternative method (e.g. GC/MS)
