Sample Collection

1. Instruct the donor not to place anything in the mouth including food, drink, gum or tobacco products for at least 10 minutes prior to collection.

   At least 10 minutes

2. Remove Sample Collector Protector.

3. Insert Sponge end of collector into mouth.
   - Actively swab the inside of the mouth and tongue with Sponge. As soon as the Sponge softens slightly, gently press the Sponge between the tongue and teeth to ensure complete saturation. The Sponge is saturated when no hard spots can be felt. Collect for at least three (3) minutes before removing Sponge.
   - Hand the saturated collector over to the tester.

Testing

1. Insert the collector vertically into the Cap and press down firmly until the Cap reaches the thread.
2. Twist the Handle clockwise 180° to tighten the Cap until the Red Arrow lines up with the other White Mark.
3. Place the test device horizontally on a clean and level surface with the result window facing up.

   1A. Incorrect
   1B. Correct
   1C. Level Surface

4. Read results at 10 minutes.
   - Read the drug strip results at 10 minutes. Test results stable up to 60 minutes.
   - All positive results are presumptive and should be confirmed by an alternate method. The preferred confirmatory method is GC/MS or GC/MS/MS.

   Security Seal

5. If results are positive, secure Cap with Security Seal and send to laboratory for confirmation.
