1. Donor provides urine specimen in cup. If desired, cap can be held by operator to initiate the test at a later time.

2. Once urine sample has been collected, screw cap firmly onto cup.

3. Check urine temperature at 2-4 minutes by reading green color on temperature indicator strip.

4. Donor dates and initials security seal. Operator checks cap for tightness and attaches security seal label over cap as shown (Optional).

5. Remove peel-off label.

6. Read adulteration strip pads between 2 minutes, if applicable.

7. Read test results at 5 minutes. Refer to diagram below for result interpretation.

8. Positive test results must be confirmed by another test method. Send cup and urine specimen with security seal label intact to a toxicology laboratory for confirmation.
